Chinese Name: _____

Class Number: _____

IGCSE Speaking / IELTS Prep Course 40 weeks

Based On Cambridge IGCSE ESL Coursebook by Peter Lucantoni

IELTS Band 5.0 ➔ 6.0 Target

Course Rationale & Pedagogical Framework

Subject: IGCSE English as a Second Language (Speaking Component)

Target Cohort: Grade 10 (Entry Level: IELTS Band 5.0 / CEFR B1)

Duration: 40 Weeks (Spiral Curriculum)

1. Executive Summary

This document outlines the rationale for a 40-week Speaking Course for Grade 10 students. Engineered using the very latest generative AI technologies—tools available only in the last few months—this course synthesizes the most current global language teaching methodologies. The curriculum is built upon the Cambridge IGCSE English as a Second Language syllabus and utilizes the industry-standard textbook by Peter Lucantoni as its primary content source. However, distinct from traditional linear instruction, this course employs a Spiral Curriculum model supported by AI-driven independent study to maximize classroom interaction and strictly adhere to local homework time constraints.

Learners are encouraged to speak in a range of different situations and for different purposes, including brief transactions, conversations, expressing their opinions, and giving short talks on a range of topics. The result is a curriculum unmatched in its academic rigor, designed to move students from an intermediate level (IELTS Band 5.0) to the higher fluency required for IGCSE success (Band 6.0+).

2. Curriculum Architecture: The Spiral Model

Research by Jerome Bruner (1960) posits that learning is most effective when key concepts are revisited at increasing levels of complexity. Consequently, this course rejects a linear "one-and-done" approach to topics.

Semester 1 (Weeks 1–20): The Foundation Phase

- **Objective:** Vocabulary Acquisition & Fluency.
- **Method:** Students cover all 20 units of the Lucantoni textbook, focusing on concrete description and personal narrative.
- **Rationale:** "Band 5" students often lack the lexical range to speak confidently. Rapidly covering all topics ensures they possess the foundational vocabulary for every potential exam theme to communicate factual information, ideas and opinions with expansion.

Semester 2 (Weeks 21–40): The Mastery Phase

- **Objective:** Complex Grammar & Abstract Reasoning.
- **Method:** The course revisits the same 20 units but shifts the cognitive demand to abstract discussion, debate, and complex grammatical structures.
- **Rationale:** By reducing the cognitive load of learning "new" topics, students can focus entirely on upgrading their syntax, such as using conditionals, passive voice, and a range of lexical structures including idioms.

3. Alignment with the 2001 Revised Bloom's Taxonomy

In Western education, Bloom's Taxonomy is the gold standard for curriculum design because it ensures students do not just passively memorize information, but actively use it to think, analyze, and create original output. By bringing this proven Western pedagogical framework to our classrooms in China, the course maps perfectly to Lorin Anderson and David Krathwohl’s 2001 revision of the taxonomy.

- **Remembering & Understanding (Lower-Order Skills):** Handled by the AI App before class. Students memorize vocabulary, understand phonetic sounds, and shadow native pronunciation.
- **Applying & Analyzing (Higher-Order Skills):** Handled during the 80-minute class. Students apply their new vocabulary to specific speaking tasks and analyze teacher models to understand how to produce coherent and relevant responses using discourse markers for addition, time, sequence, cause/effect, and contrast.
- **Evaluating & Creating (Highest-Order Skills):** At the end of the lesson, students evaluate their peers' speaking errors. They then create their own unscripted, original answers during a fast-paced speaking circuit and their post-lesson AI recording.

4. Alignment with PGCE & QTS Standards

The lesson design strictly adheres to UK Qualified Teacher Status (QTS) standards, ensuring rigorous, evidence-based pedagogy.

A. The "Sandwich" Model (Flipped Learning)

To comply with the 20-minute homework cap mandated by local regulations, we utilize a "High-Frequency, Low-Duration" approach facilitated by custom AI technology.

- **Pre-Lesson (10 mins): Input Flood.** Students use the Web App to "shadow" native-speaker models of the upcoming lesson's vocabulary. This aligns with Stephen Krashen’s Input Hypothesis, ensuring students enter the classroom with the target language already activated.
- **The Lesson (80 mins): Communicative Interaction.** Classroom time is preserved exclusively for interactive output.
- **Post-Lesson (10 mins): Retrieval Practice.** Students record their own answers into the App for AI analysis. This leverages Swain’s Output Hypothesis, where learners are forced to notice the gap between what they want to say and what they can say.

B. The "Transcoding" Strategy

We utilize the Peter Lucantoni Coursebook, the most widely respected text in the IGCSE arena. However, rather than treating it as a reading comprehension exercise, we apply a Lexical Approach (Michael Lewis).

- **Method:** Textual reading passages are "transcoded" (rewritten) into spoken models.
- **Justification:** Written English and Spoken English differ significantly in register. By converting formal texts into natural speech patterns, we provide students with authentic models of high-scoring spoken responses rather than stilted, "textbook" language.

C. Differentiation & Scaffolding (Vygotsky)

Lessons are designed within the Zone of Proximal Development (ZPD).

- **Scaffolding:** Weak students (Band 5) are supported with sentence stems and "O.R.E." logic templates (Opinion, Reason, Example).
- **Differentiation:** Stronger students are stretched through "Constraint-Based Challenges" (e.g., "Answer this question using a 3-clause sentence and one idiom").

5. IGCSE Criteria, Technical & Resource Integration

Primary Text: Cambridge IGCSE English as a Second Language Coursebook (Peter Lucantoni). This ensures full syllabus coverage and topic compliance with Cambridge International Examinations (CIE).

AI Integration & IGCSE Criteria: The course explicitly trains students to meet the exact IGCSE speaking criteria, requiring them to communicate showing control of pronunciation and intonation, with specific focus on syllable stress and sentence stress to show contrast or emphasis. The integration of the Qwen Audio API allows for personalized, immediate feedback on pronunciation and fluency—a feat impossible for a single teacher to perform manually for a full class daily. This provides high-quality Formative Assessment (QTS Standard 6) without exceeding teacher workload capacity.

6. Conclusion

This course combines traditional academic rigor with modern teaching science. By spiraling the curriculum, we ensure students remember vocabulary. By using the 2001 Revised Taxonomy, we guarantee students spend class time actively creating language. This highly efficient model guarantees a course that is engaging, compliant with school rules, and unmatched in preparing students for exam success.

课程设计理念与教学框架说明书

> **科目：** IGCSE 英语作为第二语言（口语部分）
>
> **目标群体：** 10年级学生（入学水平：雅思 5.0 / CEFR B1）
>
> **课程周期：** 40周（螺旋式课程设计）

1. 执行摘要

本文件旨在阐述针对10年级学生设计的40周口语专项课程的理论依据。本课程利用最新问世的生成式人工智能技术研发（这些技术在最近几个月才刚刚普及），深度融合了全球最前沿的语言教学法。课程体系基于剑桥 IGCSE 英语作为第二语言考纲，并以 Peter Lucantoni 编写的行业权威教材为核心内容载体。然而，与传统的线性教学模式不同，本课程采用螺旋式课程模型，并结合AI驱动的自主学习系统，以最大化课堂互动效率，并严格遵守教育部门关于课后作业时长的规定。

我们鼓励学习者在各种不同的情境中、为不同的目的进行口语表达，包括简短的事务性交流、对话、表达观点以及就各类话题进行简短演讲 。我们旨在打造出在学术严谨性上无与伦比的课程体系，切实有效地帮助学生从中级水平（雅思5.0）提升至IGCSE考试获得高分所需的流利度（雅思6.0+）。

2. 课程架构：螺旋式模型

基于杰罗姆·布鲁纳 (Jerome Bruner, 1960) 的研究理论，当关键概念在不断提升的复杂度层级上被反复重现时，学习效果最为显著。因此，本课程摒弃了“一次性完成”的线性教学法。

第一学期（第1–20周）：基础构建阶段

- **教学目标：** 词汇积累与流利度。
- **实施方法：** 学生将覆盖 Lucantoni 教材的全部20个单元，重点在于具体事物的描述与个人叙事。
- **设计依据：** 雅思5.0水平的学生通常缺乏自信表达所需的词汇广度。快速覆盖所有话题可确保学生掌握应对所有潜在考试主题的基础词汇，从而能够交流事实信息、想法，并对观点进行扩展。

第二学期（第21–40周）：精通进阶阶段

- **教学目标：** 复杂语法与抽象逻辑思维。
- **实施方法：** 课程将重新回顾相同的20个单元话题，但将认知难度提升至抽象讨论、辩论以及复杂语法结构的应用。
- **设计依据：** 通过减少学习“新话题”的认知负荷，学生可以将精力完全集中在句法升级上（如使用条件句、被动语态以及包含习语的词汇结构）。

3. 与 2001 年修订版布鲁姆教育目标分类学的对标

在西方教育体系中，布鲁姆教育目标分类学是课程设计的“黄金标准”，因为它确保学生不只是被动地死记硬背信息，而是主动运用知识去思考、分析和创造原创内容。通过将这一经过验证的西方教学框架引入中国的课堂，本课程完美契合 Lorin Anderson 和 David Krathwohl 在2001年修订的分类学标准。

- **记忆与理解（低阶思维技能）：** 在课前由 AI App 负责。学生记忆词汇、理解发音规则，并跟读母语者的发音。
- **应用与分析（高阶思维技能）：** 在80分钟的课堂内进行。学生将新词汇应用到具体的口语任务中，并分析教师提供的范例，以理解如何使用表示递进、时间、因果和转折的话语标记来产出连贯且切题的回答。
- **评价与创造（最高阶思维技能）：** 在课程尾声，学生需要评价同伴的口语错误。随后，在快节奏的口语轮转练习和课后AI录音作业中，他们需要脱稿创造出属于自己的、原创的回答。

4. 与 PGCE 及 QTS 标准的对标

教案设计严格遵循英国教师资格认证 (QTS) 标准，确保教学法严谨且基于实证研究。

A. “三明治”教学模式（翻转课堂）

为遵守本地法规关于20分钟作业上限的规定，我们利用定制的AI技术，实施“高频次、短时长”的学习策略。

- **课前（10分钟）：输入浸泡 (Input Flood)。** 学生使用 Web App “跟读”下节课目标词汇的母语者示范音频。这符合斯蒂芬·克拉申 (Stephen Krashen) 的“输入假说”，确保学生在进入课堂前已激活目标语言。
- **课中（80分钟）：交际互动。** 宝贵的课堂时间将完全用于互动输出。
- **课后（10分钟）：提取练习 (Retrieval Practice)。** 学生将自己的答案录入 App 并由 AI 进行分析。这利用了斯温 (Swain) 的“输出假说”，迫使学习者注意到自己“想说的”与“能说的”之间的差距。

B. “语体转换”策略 (The "Transcoding" Strategy)

我们使用 IGCSE 领域最权威的 Peter Lucantoni 编写的教材。然而，我们并非将其作为阅读理解练习，而是应用词块教学法 (The Lexical Approach, Michael Lewis)。

- **实施方法：** 将书面阅读段落“转码”（重写）为口语示范文本。
- **设计依据：** 书面英语与口语英语在语域上存在显著差异。通过将正式文本转化为自然的口语模式，我们为学生提供了真实的高分口语范例，而非生硬的“教科书式”语言。

C. 差异化教学与支架式教学 (Vygotsky)

课程设计立足于维果茨基的“最近发展区” (ZPD) 理论。

- **支架支持：** 为基础较弱的学生（雅思5.0）提供句型模板和“O.R.E.”逻辑框架（观点、理由、例子）。
- **差异化挑战：** 通过“限制性挑战”提升能力较强的学生（例如：“使用一个包含三个分句的复杂句和一个习语来回答这个问题”）。

5. IGCSE 评分标准与技术整合

核心教材： Cambridge IGCSE English as a Second Language Coursebook (Peter Lucantoni)。这确保了完全覆盖剑桥国际考试 (CIE) 的教学大纲与话题要求。

AI 整合与 IGCSE 标准： 本课程明确训练学生以达到 IGCSE 口语的精确评分标准，要求他们在交流时展示对发音和语调的控制，重点关注音节重音以及用于表示对比或强调的句子重音。Qwen Audio API 的整合使得系统能够对发音和流利度进行个性化、即时的反馈——这是传统课堂中单一教师无法对全班学生每日实现的。这提供了高质量的形成性评估（QTS 标准第6条），且不会超出教师的工作负荷。

6. 结语

本课程将传统的学术严谨性与现代教学科学相结合。通过螺旋式课程设计，我们确保学生牢记词汇。通过使用2001年修订版分类学，我们保证学生在课堂上积极创造语言。这种高效的模式不仅合规，更能切实有效地帮助学生在考试中取得成功。
